

**A-EFL01950/A-EFL01975** Eratix 3D FF (Flat Foamy) 860mm

In the early 2000s, “flat foamy” models were extremely popular because they could be scratch built from foam sheets you could buy in many stores. Today, most foam models are fully-moulded sport and scale aircraft – and few can match the unique capabilities and performance of flat foam models, especially those designed and built for aerobatic plus 3D flying! The E-flite Eratix 3D FF (Flat Foamy) 860mm is perfect for experienced pilots who already build and fly flat foam models, intermediate pilots who are interested in them but don't want to undertake a complicated build, and less experienced pilots who have always wanted to try but were intimidated by the extra effort and skills required to buy, build and fly such a model. The Eratix 3D FF is the easiest-to-fly, most convenient, and best value in a flat foamy model yet!

**FEATURES**

- The easiest to buy, assemble and fly flat foamy model yet – capable of slow cruising, sport flying, basic and all-out 3D aerobatics
- Specially tuned brushless motor that's factory-installed and ready for use with popular 3S 600–850mAh batteries LiPo batteries for a wide range of performance
- 15-amp Spektrum Avian Smart ESC provides real-time data via compatible receivers and transmitters
- Spektrum AR630 receiver with fly-by range telemetry (BNF Basic only)
- Easier to fly with innovative and optional-use SAFE Select flight envelope protection (BNF Basic only)
- Extremely durable yet lightweight, high-density EPP airframe with carbon fibre and composite reinforcements
- Three factory-installed digital servos and linkages, including a metal-gearred aileron servo
- Factory-finished in a high-contrast, high-visibility trim scheme for excellent orientation
- Fast and easy assembly, unlike similar class models – no glue or tape required
- Landing gear snaps into place for easy installation, removal, and replacement

**NEEDED TO COMPLETE**

- BNF Basic - 5+ channel Spektrum DSMX compatible transmitter
- PNP - Full-range 4+ channel transmitter and receiver
- 3S 11.1V 600-850mAh LiPo with IC2 Connector (or JST-RCY connector plus a suitable IC2 to JST-RCY adapter)
- Compatible LiPo charger

**IN THE BOX**

- (1) E-flite Eratix 3D FF 860mm with:
- (1) Avian 15A Brushless Smart ESC
- (1) Avian Brushless Outrunner Motor
- (3) Spektrum Sub-Micro Digital Servos
- (1) AR630 Receiver (BNF Basic only)
- (1) Product Instruction Manual
