P-SPMR20500EU NX20 20 Channel DSMX Transmitter Only

For advanced-level pilots who fly high-performance aircraft, the Spektrum NX20 20-channel DSMX transmitter provides the latest in innovative radio control. The NX20 includes an incredible array of exclusive technologies and advanced connectivity features that are seldom found in comparable 20-channel transmitters.

Out of the box, the NX20 is compatible with Smart Technology. It's ready to support your Spektrum Smart batteries and Smart Avian ESCs, so you can receive important telemetry data right at your fingertips in real time. Exclusive Spektrum Airware software is also included to provide the easiest, most intuitive programming available.

Among the upgrades included with the NX20 transmitter are gimbals with magnetic encoders. They provide advanced precision, low maintenance, and exceptionally smooth operation.
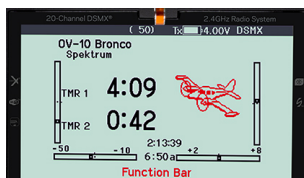

Navigating menus and viewing telemetry data is made easy by the NX20 transmitter's 5" backlit color display that delivers information in crisp, 800x480 resolution detail.

The NX20 includes programming for airplanes, sailplanes, helicopters, and multi-rotor models, with 14 programmable mixes and up to 10 different flight modes and 8 sequencers.

Everything included with the purchase of the NX20 transmitter

More proven Spektrum transmitter expertise can be found in the NX20 transmitter's ergonomic design. The contours, balance, and control positions combine to increase the accuracy of your inputs and provide unparalleled comfort. An easy-to-use roller wheel interface simplifies programming, with a 5" colour display to make menus easy to read.

From its brilliantly designed display to the Wi-Fi connectivity plus built-in Smart Technology support and exclusive upgrades, the NX20 gives experienced pilots access to a wide array of Spektrum exclusive advantages and innovations. Fly your aircraft with next-level control!
