

NANO S2

MICRO 3D POWERHOUSE

A-BLH1300 / A-BLH1380 Nano S2 Micro Heli with SAFE RTF / BNF

The best micro RC collective pitch helicopter gets even better! Like the Nano CP S model before it, the Blade® Nano S2 heli lays a path to 3D aerobatic expertise that's paved for success — with new features, including a redeveloped stabilizing system, that make challenging manoeuvres such as flips and inverted flight easy for pilots at all skill levels to master.

Blade developers first brought SAFE stabilizing technology to the Nano heli platform with the Nano CP S. If pilots felt disoriented, all they needed to do was press the Panic Recovery button. SAFE technology immediately came to the rescue, locking the model in a perfectly level attitude.

The custom-tuned AS3X system at the heart of its SAFE technology has been improved. So has the performance of the SAFE Angle Demand and Panic Recovery features. New to the Nano platform, SAFE Z Altitude Control uses the heli's on-board accelerometer to maintain a consistent altitude.

Its collective pitch design accommodates everything from gentle hovering to daring, advanced manoeuvres. Strong coreless motors and a 45C LiPo flight battery produce capable power for 3D flight. Linear servos deliver the muscle for impressive control authority.

Blade

Construction with super-resilient polymers along with a carbon-fibre main shaft and tail boom give the model's lightweight airframe amazing durability. Most impacts that occur while practicing 3D manoeuvres cause no harm. If you do happen to need a repair, nearly all of the parts from the Nano CP S are compatible with the new Nano S2.

FEATURES

- **Powerful**
Powerful coreless motors allow for advanced 3D manoeuvres.
- **Light Weight**
Low disc loading for advanced aerobatics.
- **Linear Servos**
Provide faster response and better holding torque over normal rotary servos.
- **45C LiPo Battery**
High power output for limitless aerobatics.
- **USB Charger**
Provides charge-anywhere convenience.

NEEDED TO COMPLETE

- **RTF**
Nothing! The The Blade® Nano S2 Ready-to-Fly comes with everything you need to have fun right out of the box.
- **BNF**
Compatible DSMX®/DSM2® transmitter.

IN THE BOX

- (1) Factory-assembled Nano S2 micro helicopter
- (1) Spektrum™ MLP6 6-channel 2.4GHz DSMX® transmitter (*RTF Only*)
- (1) Factory-installed Spektrum 2.4GHz DSMX receiver
- (1) 150mAh 1S LiPo battery
- (1) USB LiPo battery charger
- (1) Product Manual

EQUIPED WITH

SAFE
