

C-AXI03008V2T1/T2 1/10 SCX10 III Jeep CJ-7 4X4 RTR Rock Crawler Red / Copper

The Axial SCX10 III Jeep CJ-7 V2 is a highly detailed, officially licensed RC rock crawler that brings the iconic 1976–1987 Jeep CJ-7 to life on a proven SCX10 III chassis, combining authentic scale looks with serious off-road capability. Designed for both RC enthusiasts and Jeep fans, it features upgraded V2 electronics for improved performance and customization, a ready-to-run setup with brushed motor and Spektrum SLT3 transmitter, plus a dual-protocol receiver and stronger steel-gear servo. The T2 variant pays tribute to the classic Laredo trim with period-correct styling, while scale realism is enhanced by licensed components including Gen-Right bumpers, Raceline Daytona beadlock wheels, and Mickey Thompson Baja Boss tyres, along with a detailed interior, roll cage, and opening console. Built for trail performance, it includes a transmitter-controlled Dig function for superior handling and arrives ready for adventure—just add a 2-3S LiPo battery and charger.
